

ArmorMax

Custom Steel Furnace Relining Systems

Save money

Save time

Increase efficiency

Increase productivity

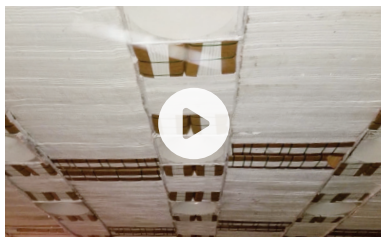

Increase worker safety

Reduce carbon footprint

ArmorMax custom engineered furnace linings increase steel mill output while reducing carbon footprints.

- Our roof panel systems are constructed of advanced fiber materials with up to ten times the thermal efficiency of standard castable refractory materials.
- Furnace cool down and start-up times are reduced by up to thirty-six hours.
- Our furnace roof panel systems reduce BTU consumption and reduce carbon footprint.

ArmorMax Overview

Boost your steel mill profits with the rebuilding of your walking beam, pusher or tunnel furnace with ArmorMax. Scan to learn more.

ArmorMax
Engineered Systems

Thermal Efficiency

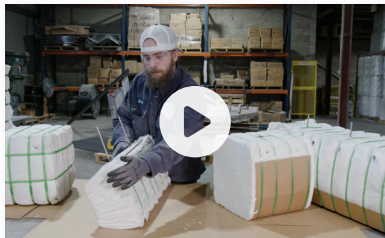

ArmorMax's PCW roof panels have ten times the thermal efficiency over standard refractory materials. Scan to learn more.

Customer Engineered Solutions

What can cutting a day and a half from your furnace downtime schedule do to your bottom line? ArmorMax knows. Scan to learn more.

Manufacturing Capabilities

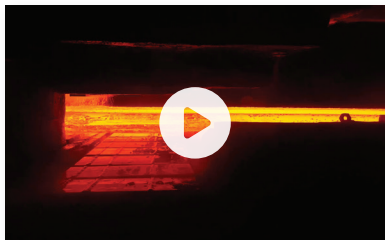

From the only manufacturer who uses ArmorWool™ new third generation ceramic fiber, we can manufacture, modify, and install to your unique furnace specifications.

Walking Beam Furnace Case Study

By changing from standard castable to PCW fiber panels, furnace maintenance downtime was reduced, emissions were lowered and production was increased. Scan to learn more.

Tunnel Furnace Overview

With our turnkey solution – engineering, manufacturing and installation of our own materials – ArmorMax provides the safest, most reliable, energy efficient, lowest cost furnace linings.
